Footnotes

This document serves as a general indication of differences. DaVinci Resolve for iPad is in constant development and not all changes and differences may be fully reflected. This content is subject to change without notice.

- ⁽¹⁾ Recent iPads with A14, A15, A16 and similar chips (including iPad and iPad Mini models) will see some features like ProRes support and Resolve and Fusion effects disabled or limited (both with and without the Studio in-app purchase). Some features like Speed Warp may use simpler fallback processes.
- ⁽²⁾ In shared single-user or multi-user projects (including imported projects), unsupported features may show overlays, difference in effects, or be disabled on the iPad.

Projects with unsupported resolution, stereoscopic 3D features and other features may not be accessible.
- ⁽³⁾ iPads in Sidecar mode in macOS offer limited pointing device support, including Apple pencil and gestures. Refer to the [Apple Support page](#) for more information.
- ⁽⁴⁾ Some user interface elements may vary or be hidden on smaller iPad displays.
- ⁽⁵⁾ Studio upgrade via in-app purchase.
- ⁽⁶⁾ Uses DaVinci Neural Engine AI.
- ⁽⁷⁾ Not available in Mac App Store installations. Mac App Store installations also follow a separate App Store purchase based license that is not interchangeable with other desktop or cloud based licenses.
- ⁽⁸⁾ Requires an iPad Pro with 16 GB RAM.
- ⁽⁹⁾ Nvidia RTX Video effects require a Windows system with a supported Nvidia RTX graphics card and driver.
- ⁽¹⁰⁾ Requires a GPU with 8 GB VRAM.
- ⁽¹¹⁾ Compatible with selected Canon, Fujifilm, Leica and Sony camera models.
Refer to the [Appendix](#) for the full list of supported camera models.
- ⁽¹²⁾ For iPad, all supported video formats are decoded and encoded with hardware acceleration. For desktop installations, hardware acceleration depends on OS. Additional video formats are GPU accelerated with the Studio version.
